SUMMARY

AI Engineer with deep experience in predictive modeling, experimentation, and analytics for payments and financial systems. Proven ability to drive revenue and reduce risk through segmentation, anomaly detection, and optimization of transaction flows. Skilled in partnering with product and engineering to design agentic product solutions to support measurement frameworks, analyze complex behavioral data, and deliver insights that improve performance, reliability, and customer outcomes.

TECHNICAL SKILLS

- **LLM Systems:** Agentic Product Solutions, multi-agent orchestration, evaluation frameworks, tool calling, prompt design, guardrails, human-in-the-loop systems
- **Languages:** Python, SQL
- **Libraries & Frameworks:** scikit-learn, XGBoost, PyTorch, TensorFlow, Transformers
- **AI Engineering Tools:** LangChain, LangGraph, LangSmith, OpenAI, Claude, HuggingFace, Anthropic, LMStudio
- **Data & Infrastructure:** DBT, BigQuery, Databricks, GCP, Spark, Vertex AI, Snowflake, Sagemaker
- **Methods:** A/B testing, experimentation design, classification, segmentation, time-series analysis, product analytics

EXPERIENCE

Lime **May 2026 - Present**
Senior Data Scientist, Payments & Fraud *Remote*

- Engineered a graph-based fraud patrol agent using LangGraph that runs 10+ Snowflake detection nodes daily, correlates signals to root causes, and delivers AI-generated investigations via Slack; identified \$3M+ in annual uncollected revenue exposure from payment fraud and suboptimal risk rules.
- Optimized pre-auth ML model thresholds across three rider segments using precision-recall sweep analysis; proposed thresholds yielded an estimated ~\$2M in annual revenue protection and no increase in uncollected revenue by reducing trip start friction for riders and pre-auth associated payment fees.

Intellica **Sep 2025 - Feb 2026**
Lead Applied AI Engineer *Remote*

- Led development and deployment of a multi-agent LLM system, enabling dynamic, tool-driven interactions in production
- Built and operationalized an LLM evaluation and regression testing framework integrated into CI/CD, enabling safe iteration and preventing production quality regressions
- Designed and deployed tool-calling and prompt architectures validated through structured A/B testing, improving response quality and evaluation scores
- Reduced end-to-end system latency by 50% through orchestration and execution optimizations
- Developed AI guardrails and human-in-the-loop annotation systems to capture structured feedback and accelerate model refinement
- Defined AI roadmap and KPIs in partnership with executive leadership to align product, engineering, and business goals

Butter Payments **Aug 2024 - Jul 2025**
Data Scientist / Data Product Manager *Remote*

- Estimated revenue impact of product features and experiments to guide roadmap prioritization
- Partnered with ML engineers on payment routing optimization, contributing to ~\$750K annual revenue recovery for a single customer
- Led development of the Payment Insights Dashboard from PRD through MVP and client delivery
- Built segmentation models to improve targeting and campaign relevance across product and marketing initiatives

Rocket Money **Oct 2021 - Aug 2024**
Senior Data Scientist *Remote*

- Delivered \$600K+ annual cost savings by optimizing billing retry logic using predictive modeling
- Built churn prediction models (gradient-boosted trees, survival analysis) and applied outputs to experiment design, reducing churn through targeted interventions
- Developed internal experimentation tools (sample sizing, runtime estimation, statistical testing) to scale A/B testing across teams

Microsoft **Jul 2018 - Sep 2021**
Senior Data & Applied Scientist *Remote*

- Built production algorithms for recurring payment detection, transaction classification, and cash flow tracking
- Developed real-time model scoring and feedback pipelines in Azure, improving detection accuracy and reducing latency
- Designed and analyzed A/B tests for product features, enabling data-driven decisions that increased adoption and model performance

Axiom Corporation **Apr 2016 - Dec 2017**
Data Science Manager *Redwood City, CA*

- Co-invented patented data security technologies and built NLP-powered data catalog search tools

- Led migration of credit models from SAS to distributed R/Spark pipelines, reducing runtime to 1/7 of original execution time

Eaze

Oct 2017 - Apr 2018

Data Analyst

San Francisco, CA

- Developed cohort-based LTV models to improve revenue forecasting and CAC decision-making
- Automated reporting pipelines to provide consistent and reliable financial insights

SELECT PROJECTS

Interview Proxy - AI Agent App interview-me.chivonpowers.com

Personal Project

- Built a RAG-based system embedding resume and CV into FAISS and generating real-time interview responses using LLMs

PATENTS

- Search Term Extraction and Optimization from Natural Language Text Files. *U.S. Patent No. 11,704,350 – Jul 18, 2023*
- System and Method for Identifying Leaked Data and Assigning Guilt to a Suspected Leaker. *U.S. Patent No. 11,350,147 – May 31, 2022*
- Statistical Fingerprinting of Large Structured Datasets. *U.S. Patent No. 11,163,745 – Nov 2, 2021*

EDUCATION

Northwestern University, Chicago, IL

Ph.D., Cognitive Neuroscience

Northwestern University, Chicago, IL

M.S., Experimental Psychology

University of California, Davis

Postdoctoral Fellowship
